Solving Common Installer Challenges

Challenge

Accessing an individual display in the centre of the array for repair/replacement without dismantling the whole wall

Solution

Getting access to that difficult centre screen of a large video wall is no longer a problem thanks to pop-out mounts from B-Tech. Their BT8310 mount is a tried and tested solution that has been used in countless installations around the globe, from control room projects to retail displays.

A single push and release system gives integrators fast and easy access to screen fixings and connectivity, making maintenance and/or replacement of displays a fast and simple process.

Furthermore, the mount's pop-out mechanism features a rigid design which allows it to pop straight out/in with virtually no lateral movement - meaning screen edges will not clash during the movement. This feature is particularly beneficial with latest displays having next to no bezel and susceptible to damage if impacted from the edges.

Mark Walker, global business development manager for B-Tech AV Mounts, said: "We knew we were onto a winner when our UK engineers developed the BT8310. In fact, such is the popularity of the bracket that we have recently integrated this proven 'pop-out' technology with our System X range and will be launching this to market very soon, meaning integrators will have easy access convenience to any screen; whether it's a video wall, menu board, or recessed application."
