B-Tech - turning walls into wonders with its digital signage

Introducing the BT8310 “Professional Video Wall Mount with Quick Lock Push System”

The latest video wall mount from the audio-visual firm B-Tech has set new standards of simplicity and ease of use.

Reaction to the new product has been extraordinary - not least because of its revolutionary “quick-lock push system”.

This enterprising design means the video wall screens can be popped out and back in again simply by pushing them - giving instant access to the rear for maintenance.

It is especially useful when the mount is placed in a tight area such as a recessed wall where access is difficult.

With many systems you have to scramble around the back of the display to pull lock release levers.

When a screen in the configuration is pushed back it pops out – in the same way you push the button on the end of a pen.

This gives immediate access to the mount and everything behind it, which might require maintenance or need adjustment.

After the work is completed the screen is simply pushed back in and it locks automatically into the video-wall.

And one person is all that is needed to carry out any maintenance or adjustment, and this saves time and money.

In other systems, two people are required to carry out the same work.

Yet another important and time-saving element of B-Tech’s BT8310 product are the spacer kits which are also available.

These cut out any need for guesswork, estimation or complicated calculations and enable installers to confidently know exactly where each bracket goes.

And what's more, unlike other systems the same kit can be used for one video-wall, and then utilised for future installations too.

This means install time is drastically reduced, as is the risk of error. And the cost of future installations is also reduced as additional spacers are not required.

The mount also comes with eight adjustment knobs to fine-tune the display and get the alignment perfectly accurate - without any tools at all.

This micro-adjustment design enables screens to be aligned perfectly even if the wall they are mounted on is not.

The entire system works in landscape or portrait format and is packed full of cost and time-saving features.

Matt Bennett, managing director of B-Tech, which is based in Daventry, Northants, said: "Already this product has become popular in many countries, and that is rare so soon after its launch.

"We listen to the feedback from our customers, who were keen for innovations that the BT8310 includes.

"The Professional Video Wall Mount with Quick Lock Push System is easily installed and the push-lock system makes maintenance especially easy.

"It requires no tools to access the mount or to align the screens accurately, due to its eight adjustment points.

"In a fast-changing industry the ability for speed and ease of alteration is paramount.

"We are extremely excited about this product and are able to offer it at a very competitive price."

B-Tech introduces new 'quick lock push system' mount

27 November 2012

Story Code : er76

Audio-visual company B-Tech has released its latest video wall mount, the BT8310, featuring a 'quick-lock push system'.

Its design means the video wall screens can be popped out and back in again simply by pushing them – offering a simple way of accessing the rear of a screen for maintenance.

Another timesaving element of B-Tech's BT8310 is the spacer kits, which are included with the product. These are said to cut out any need for guesswork, estimation or complicated calculations and enable installers to confidently know exactly where each bracket goes.

What's more, unlike other systems, the same kit can be used for one video-wall, and then utilised for future installations too. This means install times can be reduced, as can be the risk of error.

The mount also comes with eight adjustment knobs to fine-tune the display and get the alignment accurate, even if the wall they are mounted on is not flat. Moreover, the entire system works in landscape or portrait format.
